We have investigated the regulation of the cell surface expression of two EGF receptors on human B-lymphoblastoid cells in culture using three approaches: antibody cross-linking, immunoprecipitation with anti-receptor antibodies, and immunofluorescence using specific anti-receptor antibodies. These methods were used to examine the influence of factors which control EGF receptor number and function. For this purpose, we have used the human B-cell line Ramos and the Burkitt's lymphoma cell line Ramos-B (derived from the Ramos cell line) which express a high level of EGF receptors, and Ramos-M, a variant of the Ramos-B cell line which exhibits a marked decrease of both EGF receptor number and function. The studies indicate that the expression of EGF receptors by the Burkitt's lymphoma cell line was not accompanied by a corresponding increase in the number of receptors, but was accompanied by an increase in the affinity

"It is possible that the fire in the Mukachevo fuel storage facility was initiated by terrorists, similar to what happened in some other facilities in the Donbas region," Ryabkov said in a statement published by TASS on Wednesday, calling for a "penetrating investigation" into the incident. "We call on all participants in the conflict, including the illegal armed groups, to exercise restraint and not take actions that can escalate the situation," the Russian official added. Ryabkov also expressed his condolences to the Ukrainian people over the incident and said Moscow had called on Kiev to "carry out a thorough investigation into this tragedy and come to grips with those responsible." On Monday, Kiev's National Security and Defense Council said that Kiev had received a letter from 82138339de
